

WHY LEISURE POOLS SOUTH AFRICA ONLY MANUFACTURE AND INSTALL PRE-MOULDED FIBREGLASS SWIMMING POOLS

Fibreglass Composites can be manufactured with a flexibility strength of up to 17 times that of concrete, minimising the risk of ground-movement associated damage to your pool. The use of cutting-edge technology and strict adherence to correct production methods ensure that our pools are of the highest quality, guaranteed for 10 years.

Not only are fibreglass pools easier and more cost-effective to maintain, the smooth finish on the gelcoat layer provides no place for bacteria and algae to take hold or grow. Automatic pool cleaners and salt chlorinators can be fitted to your Leisure Pool making it hygienic and hassle free for LEISURE living.

As with all investments, it pays to know a little more about the quality of the product you intend to purchase. Unfortunately, not all pre-moulded fibreglass swimming pools are manufactured according to recommended guidelines. At Leisure Pools South Africa, strict adherence to these guidelines enables us to manufacture a product which is consistent with leading international standards.

The following diagram illustrates the composition and process used by Leisure Pools South Africa.

THE MOULD

Leisure Pools South Africa inspect their moulds to ensure that they are prepared to a gloss finish. This gives a magnificently smooth feel to the interior of the swimming pool. It is imperative that the surface of the mould is properly prepared as the product will be its mirror-image. This meticulous preparation process enhances the convenience and cost-effectiveness associated with a Leisure Pool.

SPRAY GELCOAT

Both the standard blue and the Specklecoat gelcoats are 100% ISO NPG and are applied in a single application using the most sophisticated equipment currently available. The ISO NPG gelcoats are of a far higher quality than a standard gelcoats, have outstanding UV resistance and are scientifically formulated for problem-free results.

SPRAY BARRIER COAT

As part of our production process, Leisure Pools South Africa apply a barriercoat behind the gelcoat. This removes any print-through from the fibreglass laminate onto the gelcoat surface. More importantly however, it provides protection against blistering and osmosis that occurs when water reacts with the laminate behind the gelcoat, most commonly associated with swimming pools manufactured with inferior raw materials. This 100% vinyl barriercoat, applied with the most advanced equipment available, safeguards and guarantees your pool.

FIBREGLASS APPLICATION SPRAY

A chopper gun controls thickness variation and catalyst input during the fibreglass laminate application process. The catalyst percentage is critical to the durability and performance of the final product. Using this particular reinforcing process ensures that our products maintain incredible strength and chemical resistance. Our pools are transported throughout South Africa and exported internationally. Their strength has withstood all tests, conducted both inside, and above, ground.

EXTERNAL SURFACE SEALER

The application of this aesthetic surface flocoat assists in preventing reverse penetration of soil chemicals into the fibreglass swimming pool.

Memories of summers spent in and around the swimming pool with family and friends last a lifetime. For the past 20 years, Leisure Pools South Africa have been designing, manufacturing and installing top quality Fibreglass Swimming Pools. Using only the highest quality raw materials and the most advanced equipment, we are at the forefront of the Fibreglass Swimming Pool industry in South Africa. Our experience and dedication to quality provide peace of mind and ensure that your swimming pool remains a hassle-free source of enjoyment.
